BORRANI M-RAY.6 TUBELESS WIRE WHEELS

BORRANI M-RAY.9 TUBELESS WIRE WHEELS

Designed, developed and manufactured in Italy combining cutting-edge engineering and craftsmanship for uncompromised riding pleasure. The high grade aluminium rim is cold machined by proprietary spinning process without welding, and finished on CNC lathe. This technology ensures a perfectly circular, lightweight rim with limited run out.

The hub is CNC machined from billet of solid aluminium alloy.

Spokes are stainless steel with the exclusive 'ONLY-SPOKES' system that eliminates nipples and reduces weight in the peripheral area.

Perfect air tightness is provided by the patented tubeless system. Safer, responsive ride in cornering and acceleration.

Available as M-Ray.6 and the stylish M-Ray.9 series with oversized, widely spaced spokes.

Ultralite and *Tailor-made* options are available for personal commissioning of rim size, colours, finish and more bespoke features.
